

Do ocean mineral concentrates work?

COMPOST TEA brewed with Sea-Crop® has over twice the microbial content. Only one part in three hundred added to the brew is needed to achieve this result.

Dave Olson in Clarksburg, California has had great success using Sea-Crop® as an input when brewing microbial inoculants.

Sea-Crop has been an excellent complement to our microbe inoculant brewing formulation. Sea-Crop's huge range of dissolved nutrients have had a very positive effect on our microbe populations. Including Sea-Crop has enhanced our microbe diversity and significantly boosted our populations which recently reached over 1 Trillion microbes/ml (1×10^{12})."

We also include Sea-Crop in most of our crop programs as it has similar outsized beneficial impacts on our crops as well." ~ Dave Olson
