

SEA-CROP®

Nature's Gift to Agriculture

Greg Payne with his exceptional Sea-Crop® treated seed collards.

"I first tried **Sea-Crop®** in 2013 on a collard seed field. I applied 2 gallons of **Sea-Crop®** with 40 gallons of water. I made 2 applications three weeks apart in the spring time. In late July I harvested the field. The average yield has been 1200 pounds per acre. I got paid on 1800 pounds per acre. That was a 50% increase which really caught my attention. In 2014 I did the same treatments on a field of sugar beets. **Sea-Crop®** performed very well, 3 tons per acre increase and better sugar content. The same treatment was done on Red Clover seed and gave an 18% increase in yield on the treated versus untreated. Arthur Zeigler has created a wonderful product for all farmers to use. **Sea-Crop®** is amazing."

— *Very satisfied farmer, Greg Payne, GSP Farms, Caldwell, Idaho*

"Every farmer needs to use SEA-CROP®."
